SunTechnics Press Release from June 15th, 2007

### **Solar Electricity with 10-Year Guarantee**

*SunTechnics introduces an energy performance guarantee to ensure solar-system owners' investment*

*Sacramento, Calif., June, 15 2007.* SunTechnics is offering commercial and residential solar power customers an energy performance guarantee that ensures optimal return on investment. This unique energy performance guarantee included in the final system price assures commercial and residential solar customers the specified kWh energy output for 10 years. The SunTechnics performance guarantee is the only one in the industry offering monetary compensation regardless of system size and kind of installation.

"By having their own solar electric system, homeowners and commercial customers can independently generate up to 100% of their electrical usage. That means that you could eliminate your electric bill, depending on the system size", says Florian Edler, Managing Director of SunTechnics USA. "The pay-back for a solar electricity system ranges between six to ten years. With this type of commitment that SunTechnics stands behind, our customers can have the peace of mind that no other solar company provides."

After analyzing the specific needs of each customer, SunTechnics calculates the expected annual energy output and provides an electricity savings analysis. Additionally, SunTechnics informs customers of the federal tax credits and processes the local incentive application. To increase planning comfort, SunTechnics offers professional financing through independent partners that help to keep payments low and cash-flow positive from the start. Extensive engineering expertise, acquired over more than 10 years and thousands of solar installations worldwide, enables the planning and installation company to commit to a guaranteed energy output, specific to a customer's system and location. In countries such as Germany and Spain, the performance guarantee has proven to be a key factor for SunTechnics customers. Sales of solar systems rose significantly after introduction of the guarantee in 2001 as customers gained confidence in SunTechnics' premium product portfolio and the first-class energy investments with limited risk and guaranteed financial return.

In the state of California, the performance guarantee is accompanied by the 10-year mandatory component and labor warranty of the California Solar Initiative, providing no-cost repair and replacement of system components including any associated labor. Additionally, the solar systems are equipped with monitoring solutions that ensure optimal performance throughout their life.

### **About SunTechnics**

SunTechnics is a worldwide leading supplier of turnkey systems for the utilization of renewable energy and is dynamically pushing ahead with its international growth. SunTechnics is a subsidiary of the publicly traded company Conergy AG, the biggest solar energy company in Europe.

The basis for SunTechnics' success in markets with differing needs and requirements lies in the company's vast experience in planning and installation. Extensive engineering know-how in photovoltaics, solar thermal, bioenergy, HVAC engineering or hybrid systems, acquired over a period of more than 11 years through building thousands of systems, enables SunTechnics to adapt the energy technology to suit local conditions and to offer its customers optimized system solutions that satisfy their individual needs at a high quality level.
